Section I-Training of First Group

HT EXOTIC *HBHOMER*
Army Support: Since the training of Pixies for air infiltration was to occur in occupied Germany a basic premise ensued, that Army support would be essential. This was demonstrated on any number of occasions. Arrangements had to be made through Munich Military Post which would permit members of the training staff the use of certain Army facilities, e. g., Post Exchanges. Again Munich Post was called on to furnish billets for those members of the staff who had families to quarter. When the training site was finally obtained at Murnau there were a multitude of incidentals which required this support. Coal, rations, mattresses, beds, bedding, and firing range facilities to mention a few. Specifications for parachute training rig to include fuselage, towers, and jump platform were given to the Post Commander, Murnau sub-post who subcontracted these in sections to German contractors as training aids for the USRAUER Engineer School. The sections were then transported to the training site by a small crew of the most trusted non-coms at the Engineer School, and assembled. Finally, it was necessary to call on Munich Post to furnish a cook in order that training could commence.

Id. (2) Training Facilities: The commencement of training hinged on the final closing of the lease for the Loeb estate on Stafelsee and approximately two miles from Murnau. This was finally accomplished during the first week in October 1950. The Loeb estate consists of approximately sixty acres of rolling wooded terrain fronting on Stafelsee (2) Good visual cover and concealment from surrounding points exists, and the entire exterior line of the estate is fenced. The estate accommodates two farm houses, a gate house, a guest house, and the main mansion. Occupants of the gate house, and renters of the second floors in the two farm houses were evicted. The two farm families occupying ground floors in the farm houses were permitted to remain. These farm houses are

located in a depression at one edge of the estate, away from and visually obscured from the main mansion. Control over these two families was established by capitalizing on the mortal fear they possessed of being evicted, and deprived of a means of livelihood. They were never seen around the mansion where training was conducted. The servants in the mansion, an elderly man and his wife, were retained. Control was again established here through the same medium. Signs were posted on all roads leading into the estate, and gates were locked. The parachute training rig was placed on an old tennis court located in a depression, and surrounded by trees. The only facility utilized off the estate was the army range located approximately seven miles from Murnau.

Purchased Supplies: Preceding and during training it was necessary to purchase a considerable amount of operational and training supplies and equipment to sustain the operation. For the most part these items were purchased from the German economy. Purchase of many items, particularly operational, contemplated the equipping of another group. (See Incl. #2)

Conduct of Training: The sixteen trainees comprising the first group were received on the night of 12 October 1950. They were taken from the Labor ¹⁸²⁴⁷³ Company to a rendezvous point near Munich where they were transferred to a blacked-out truck and control of the covert school staff for movement to the site.

Equipment was issued the first night, and training commenced the following morning. (Oct. 13) For subjects covered, and time allotted see Incl. #1, Corrected Training Schedule)

The Staff made itself available to the trainees at any time in the evening for the purpose of review or clarification of subjects covered in the schedule. Generally the trainees were eager to receive this additional instruction, and availed themselves of the opportunity.

With the exception of range work, parachute training, night infiltration, and calisthenics all training was conducted inside the main mansion. Range work was the only subject conducted off the estate, and for this the trainees were moved in a blacked-out ambulance to the site.

Since time was of the essence in preparing the trainees to meet the target date of November 3, 1950, once the schedule commenced there was no break. That this invoked a strain on the trainees there can be no doubt. Many of them were dealing for the first time with slightly technical subjects which could have been more ideally handled had additional time been available. However, the trainees, themselves, admitted that they had received three weeks normal instruction in the time allotted prior to their departure.

While at the school no member of the staff ever mentioned the locale in the presence of the trainees. From all indications the location of the school was a well kept secret, for the trainees asserted in Greece that the school was located near Berchtesgaden, Germany.

Ample time was not available to thoroughly examine the trainees on subjects covered. Nor could a thorough evaluation of the individual be made. Written examinations were given, however, in compass and map reading, practical examinations in parachute and close combat work.

As the trainees came to the school they were broken down into four teams with the leaders previously selected at the Labor Company. Upon completion of the course the staff generally agreed that in only one instance was the team captain without question the best qualified man for the job.

Training at the school was maintained under a semi-military discipline. Generally the instructors pursued a helpful but business like attitude, and did not allow themselves to become familiar with the trainees. This served to emphasize the seriousness of the training and the mission on which the trainees were about to embark. On only one occasion was an instructor observed engaging in frivolous and irrelevant conversation with trainees, and this one incident served to lower the respect and esteem of the trainees for that instructor.

Everything possible within the limitations imposed by availability and the nature of the operation was done to maintain the morale of the trainees. They were given good food, well prepared, and in sufficient quantities. This was in direct contrast to conditions existing at the Labor Company, and what the trainees had known for many years previous. They slept between clean sheets. Candy, tobacco, chewing gum, and beer were provided per gratis. A radio, playing cards, chess and checker sets, and use of the main living room were provided during what little time was available for recreation.

Section II-Recommendations for Future Training

Selection of Leaders: All trainees should enter the school in the same category, as students. After three weeks of observation and evaluation the leaders would be chosen by the staff and allowed to function in that capacity during the final week. Methods and/or qualifications as described in "Assessment of Men", the Army manual on "Leadership", and Colonel Munson's book on "Psychology of the Leader", might serve as a guide for this selection.

Training Manuals: Ideally, pertinent reference material should be translated in the trainee's language, and sufficient manuals provided to allow the trainee personal preparation, study, and review.

Training Equipment: A projector and all necessary films should be provided the school. In the past this was not done. Projector and film were drawn from Munich Post. Since Army projectors and film are on a scheduled basis conflicts and difficulties may be anticipated in future courses.

An outdoor obstacle course should be erected for future courses. This can be done at little expense, and ideal terrain for the purpose exists at the estate.

Additional Subjects: Instruction in grenades and demolitions should be embodied in future courses. Since the success of any uprising or guerilla warfare relies to a great extent on the disruption of communications, the latter subject in particular is a must.

Training Period: The course should be lengthened to four weeks for the following reasons:

1. The introduction of additional subjects.
2. To allow more thorough preparatory work in the use of weapons.
3. To allow training in enciphering, deciphering, and the use of pads per the master signal plan adopted after the termination of the past course.
4. To provide a more thorough close combat and physical hardening program.
5. To provide ample time for adequate examination and evaluation.
6. To provide at least one day per week for rest and recreation.

Number of Trainees: Facilities at the training site can accommodate thirty students. Any less than twenty four is wasteful of time and money.

III-General Comments

✓ 1. All preliminary details of the operation to include packing of equipment bundles, documentation, issuance of maps, briefing, etc., should be accomplished at the training site. The infiltrates should then be held for a period not to exceed 48 hours, weather permitting, and that for rest only, at the staging area.

(Erding Air base) 2. Air transportation from Germany to the staging area should emanate from the field closest to the training site. This will obviate the necessity of an all night truck ride as taken by the past group. Further the infiltrates will arrive at the staging area in the best possible physical and mental condition, rather than sick and with several cases of pneumonia as occurred in the last group.

3. Amusement films should be provided the school for recreational purposes. Films of the "Mickey Mouse" type with little or no dialogue are most suitable.

4. A permanent cook and assistant should be provided the school. This will eliminate the necessity of procuring same on a hit or miss basis.

5. For security purposes four reliefs of two each war dogs and tenders should be provided at the training site. These may be obtained from EUCOM.

6. A 2-1/2 ton truck should be provided the school. The present ambulance is in many instances inadequate.

7. BGFiend should be completely divorced from DTRapad. Fiend should have an administrative officer, a liaison officer, and a secretary working out of Munich. These should be under the immediate supervision of the Director of the Covert School who in turn is under the direction of the Field Chief, Fiend. This will provide a better controlled, better administered, and better sustained operation.
